Bacteriol. 179:552-556(1997).

-!- FUNCTION: INVOLVED IN THE TRANSMISSION OF SENSORY SIGNALS FROM THE CHEMORECEPTORS TO THE FLACELLAR MOTORS. CHEA IS AUTOPHOSPHORYLATED; IT CAN TRANSFER ITS PHOSPHATE GROUP TO EITHER CHEB OR CHEY (BY SIMILARITY).

-!- SUBCELLULAR LOCATION: CYTOPLASMIC (POTENTIAL).

-!- SIMILARITY: TO OTHER PROKARYOTIC SENSORY TRANSDUCTION HISTIDINE

RESULT 1 SAZQK1 major merozoite surface antigen precursor - malaria parasite (Plasmodium falciparum)

C; Species: Plasmodium falciparum
C; Species: Plasmodium falciparum
C; Species: Plasmodium falciparum
C; Date: 30-Sep-1987 #sequence\_revision 30-Sep-1987 #text\_change 09-Jun-2000
C; Accession: A25120
R; Mackay, M.; Goman, M.; Bone, N.; Hyde, J.E.; Scaife, J.; Certa, U.; Stunnenberg, H. EMBO J. 4, 3823-3829, 1985
A; Title: Polymorphism of the precursor for the major surface antigens of Plasmodium f A; Reference number: A91030; MUID:86136024
A; Rolecule type: DNA
A; Molecule type: DNA
A; Molecule type: DNA
A; Residues: 1-1631 cMAC>
C; Comment: The merozoite stages of different strains have strain-specific surface ant C; Comment: P. falciparum has three stages: sporozoite, merozoite, and gametocyte. The C; Comment: P. falciparum has three stages: sporozoite, merozoite surface antigen
C; Superfamily: major merozoite surface antigen; tandem repeat; transmembrane pr C; Superfamily: major merozoite; surface antigen #status predicted cMAT>
F; 1-19/Domain: signal sequence #status predicted cMBN>
F; 67-84/Region: 3-residue repeats (6-G-T/P)
F; 1614-1631/Domain: membrane anchor #status predicted cMBN>
F; 97, 259, 755, 759, 835, 911, 955, 1049, 1156, 1165, 1436, 1563/Binding site: carbohydrate (Asn

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A45545
major merozoite surface antigen - malaria parasite (Plasmodium falciparum) (fragments)
C;Species: Plasmodium falciparum
C;Species: Plasmodium falciparum
C;Date: 17-Feb-1994 #sequence_revision 17-Feb-1994 #text_change 09-Jun-2000
C;Accession: A45545
R;Blackman, M.J.; Ling, I.T.; Nicholls, S.C.; Holder, A.A.
Mol. Biochem Parasitol. 49, 29-33, 1991
A;Title: Proteolytic processing of the Plasmodium falciparum merozoite surface protein-1
A;Reference number: A45545; MUID:92131048
A;Accession: A45545
A;Status: preliminary
A;Molecule type: DNA
A;Residues: 1-400 cBLA>
A;Residues: 1-400 cBLA>
A;Note: sequence extracted from NCBI backbone (NCBIN:77612, NCBIP:77621)
C;Superfamily: major merozoite surface antigen; tandem repeat
C;Keywords: glycoprotein; merozoite; surface antigen; tandem repeat

Proc. Natl. Acad. Sci. US.A. 88, 4030-4034, 1991
A.Title: Primary structure of the merozoite surface antigen 1 of Plasmodium vivax reveal
A.Reference number: A39401
A.Accession: A39401
A.Status: preliminary
A.Molecule type: DNA
A.Residues: 1-1756 <-DEL>
A.Cross-references: GB:M60807
C.Superfamily: major merozoite surface antigen
C.Seywords: surface antigen

major merozoite surface antigen precursor - Plasmodium chabaudi chabaudi
C; Species: Plasmodium chabaudi chabaudi
C; Species: 30-8ep-1993 #sequence_revision 30-8ep-1993 #text_change 26-Aug-1999
C; Accession: A45546
R; Delecrinider, W.; Hendrix, D.; Bendahman, N.; Hanegreefs, J.; Brijs, L.; Hamers-Ca A, Tichem. Parasitol. 43, 231-244, 1990
A,Title Molecular cloning and sequence analysis of the gene encoding the major meroz A, Reference number: A45546
A; Steperence number: A5546
A; Status: preliminary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ŝ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A;Cross_references: EMBL:Z98551; NID:e1331903; PID:e1331922; PIDN:CAB11140.1

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

GENERAL INFORMATION:

APPLICANT: Stewart et al.

TITLE OF INVENTION: Nucleotide Sequence Encoding Carbamoyl Phosphate

Patent No. 6183996

TITLE OF INVENTION: Synthetase II

FILE REPERENCE:

CURRENT FILING DATE: 1998-09-10

EARLIER PAPLICATION NUMBER: D16380

EARLIER PAPLICATION NUMBER: P16380

EARLIER PILING DATE: 1993-12-02

EARLIER APPLICATION NUMBER: 08/46,855

EARLIER PILING DATE: 1993-12-02

EARLIER PILING DATE: 1995-07-06

NUMBER OF SEQ ID NOS: 15

SEQ ID NO 2
